Performed By: _____

Test Results DATE: _____ Negative Positive

If Positive please describe by lesion size in mm. or by appearance:

Read by: _____

INFORMATION: Your TB skin test should be read by a Healthcare Professional **within 48 to 72 hours (2 - 3 days)**. BrightStar Office nurses or staff at the Clinic can read your Test. TB (Tuberculosis) is a bacterial infection that can cause coughing, weight loss, or bloody sputum. A positive test requires a chest Xray read by your Provider to determine if there is active TB. If TB is active then medications will be prescribed by your Provider who will inform you as to when you can return to work.
